### Job description:

<b>Work Area:</b>	Informatics > Digital Image Processing > HDR
<b>Project overview:</b>	Tracking multiple objects, in real time, using computer vision algorithms is a very demanding and challenging task especially when this has to be accomplished in an extreme light condition environment. This project will research and develop new high dynamic range (HDR) algorithms to robustly track and display, in real-time, multiple objects in extreme lighting conditions in order to deliver a step change in information quality from video data interrogation.
<b>Objectives:</b>	The research fellow will carry the following research activities: - Help to build a HDR system that is able to capture a very high dynamic range; - Implement state-of-the-art tracking algorithms that takes HDR imagery as input; - Capture HDR footage with the system. - Annotate video sequences - Publish results in leading conferences or journals.

<b>Academic Qualifications:</b>	BSc in computer science or similar field.
<b>Minimum Profile required:</b>	Programming skills in C/C++/C#. English: good language skills both written and oral.
<b>Preference factors:</b>	Knowledge of computer vision systems, HDR, tracking algorithms, video encoding, machine learning.
<b>Monthly Grant:</b>	€745,00 (Degree) according to the Stipends values of the grants awarded directly by the FCT, paid by bank transfer. The grant holder may also benefit from additional incomes in the sequence of a quarterly evaluation process (Clauses 12 and 13 of INESC TEC Grants Regulation and Annex II), up to a maximum of 50% of the monthly grant.
